Final-year BSCS student at FAST and AI Engineer Intern at Agento. Builds LLM-powered tools end to end, from database and backend through to the browser, with a background in systems programming and machine learning.

EDUCATION

National University of Computer and Emerging Sciences (NUCES, FAST) — Karachi, Pakistan
Bachelor of Science in Computer Science — 2023 – 2027

WORK & LEADERSHIP EXPERIENCE

Agento — Remote
AI Engineer Intern — August 2026 – Present

- Won Champion, placing 1st of 30 in The Agento Gauntlet '26, a paid national testing cohort for Agento's AI agent platform, which led to a direct offer for this role.
- Test and improve the quality and reliability of Agento's AI agent platform as part of a team of about 8 engineers, ahead of the product's launch.

AlphaVenture — Onsite
Software Engineering Intern — June 2026 – July 2026

- Built the AI analyst for the company's Y Combinator startup product: a chat tool answering plain-English questions about 5,998 startups from a live MariaDB database, returning tables, charts, and full reports streamed to the browser as the model writes them. PHP 8.3 and plain JavaScript, no framework.
- Designed a Model Context Protocol server as the model's only path to the database, permitting read-only queries with size caps and backing it with low-permission accounts, so a model-written query could not alter or overload the data.
- Cut the wait on a user's first message from 61 to 24 seconds by tracing the delay to startup work deferred until the first request rather than the model itself, then moving that work to server boot.
- Shipped the same chat as an embeddable widget on the team's public site, serving one shared copy of the code so the widget and the standalone app could not drift out of sync.
- Handed the project to AlphaVenture's engineers; it is now live in production at hackerman.alphaventure.com.

Nexium — Remote
AI & Web Development Intern — July 2025

- Built and deployed 3 full-stack AI-powered applications end to end (Mental Health Tracker, Quote Generator, Blog Summariser) using Next.js, Supabase, MongoDB, ShadCN UI, Vercel, and n8n for AI workflows.
- Improved deployment reliability by implementing CI/CD pipelines, secure authentication, and database integrations.

Dev Weekends — Remote
Software Development Fellowship — June 2025 – August 2025

- Completed a mentor-led fellowship spanning 30+ DSA sessions and 12 engineering sessions (JavaScript, React, Node.js, system design); solved 300+ algorithm problems and contributed to open-source capstone development.

PROJECTS

- **Baymax: AI Career Copilot (AI Mustaqbil 2.0 Hackathon).** Built the career-roadmap agent in a five-agent system, generating 90-day learning plans with constraint satisfaction (AC-3 arc consistency and backtracking search) to enforce prerequisites and realistic scheduling before an LLM turned the validated plan into readable guidance. Added responsible-AI guardrails: per-IP rate limiting, PII-free logging, explainable scoring, and output fallbacks. Python, FastAPI, React, TypeScript, Groq LLaMA 3.3-70B, Whisper, Mem0 across a 17-endpoint API. Deployed and live.
- **Advanced Producer-Consumer Kernel Module.** Linux kernel module running 1 producer and 4 consumer kernel threads over a 20-slot circular buffer with 3 priority levels, drained highest-priority-first. Split interrupt handling into a shared-IRQ top half that queues a workqueue bottom half so the buffer fill can safely take a mutex; synchronized with counting semaphores, a mutex, and bounded wait queues. Exposed 6 userspace interfaces across procfs, sysfs, debugfs, and three misc character devices. 600 lines of C; team of 4.
- **NeuroDetect: Parkinson's Disease Detection.** Trained a TensorFlow/Keras classifier on clinical data, then audited it for target leakage and found that 3 of 32 features were clinical assessments of Parkinson's itself. Retraining without them dropped ROC-AUC from 0.91 to 0.74; removing motor-symptom flags as well collapsed it to 0.53, no better than chance. Identified the dataset as synthetic from uniform marginals and a maximum inter-feature correlation of 0.08, and published the honest metrics rather than the inflated headline number.

SKILLS, ACTIVITIES & INTERESTS

Technical Skills: C/C++, Python, PHP, SQL, JavaScript, TypeScript, Bash, Assembly, Linux, React, Next.js, FastAPI, Node.js, MariaDB/MySQL, MongoDB, Supabase, Apache, Model Context Protocol (MCP), Server-Sent Events, TensorFlow, Scikit-learn, NumPy, Pandas, Chart.js, ShadCN UI, Git/GitHub, Claude Code
Leadership: Head of Marketing & Co-Head of Graphic Design, Robotics and Automation Society; Co-Head of Content, Developer Student Club; Co-Head of Marketing, FAST Entrepreneurship Society.
Interests: Chess, graphic design, cycling.
